Methodology

The May survey is the twenty-second in a series of survey's that gauges attitudes of Hispanic and Latino's in the United States. The data is collected using a mixed mode sample of online and telephone participants. The question design and analysis for the Index of Consumer Sentiment is adopted from the University of Michigan's which began in 1946, measuring consumer attitudes and expectations, and are used to evaluate economic trends and prospects (<http://www.sca.isr.umich.edu/reports.php>)

All respondents interviewed in this study were part of a fully representative sample using mixed mode random stratified probabilistic sampling method of N=500 Hispanics over the age of 18, based on a series of screening questions. The margin of error for the sample is +/- 4.33% in 19 of 20 cases.

The survey was administered using an Automated Telephone Interviewing (ATI) system (n=236). The ATI system allows data to be entered directly into a computerized database through the numbers on interviewee's phone, providing a highly reliable system of data collection. The survey was also administered through USAMP, an online sample of Hispanics (n=264). There was a 5.2% response rate for the ATI calls.

The survey was presented in both English (n=337) and Spanish (n=163) versions.

The survey was conducted May 1-29, 2016.

The results presented in this report include univariate and bivariate analysis of the data. Frequency distributions for each item included on the questionnaire are shown in the tables. In all cases, cross-tabulation results are also shown. This type of bivariate analysis examines differences between sub-groups of the overall population.

In the cases where cross tabulation results are presented, a chi-square test, an independent t-test for means, or a Z-test for independent percentages is shown. A chi-square test is used in cases where comparisons are made for categorical variables. A t-test is used in cases where comparisons are made for measurement variables. A Z-test is used in cases where comparisons are made between independent population percentages.

The purpose of these statistical tests is to determine whether or not the observed difference between sub-groups in the sample is due to sampling error or whether it is due to a real difference in the population. When the results are statistically significant, it strongly suggests that the observed difference between sub-groups found in the sample is due to a real difference in the population, and not due to sampling error.

A chi-square significance level of .05 indicates significance at the 95 percent level. In other words, it is 95 percent likely that the results are due to a real difference between comparison groups. A chi-square significance level of .01 indicates significance at the 99 percent level. When a t-test or a Z-test is shown, lower- and upper-case letters indicate significance at the 90 and 95 percent levels respectively.

English Version May 2016 FAU BEPI Survey Instrument

What is your gender?

Press 1 for Female

Press 2 for Male

What is your age group?

Press 1 for 17 and under (end survey)

Press 2 for 18-34

Press 3 for 35-54

Press 4 for 55 and above

Are you of Hispanic, Latino or Spanish origin?

Press 1 if you're not of Hispanic, Latino or Spanish origin (end survey)

Press 2 for yes, Mexican, Mexican American, Chicano

Press 3 for yes, Puerto Rican

Press 4 for yes, Cuban

Press 5 for yes another Hispanic, Latino or Spanish origin

Press 6 to repeat the answer choices

Were you born in the United States?

Press 1 for yes

Press 2 for no

How long have you lived in the United States?

Press 1 for less than 5 years

Press 2 for 5-20 years

Press 3 for 20+

We are interested in how people are getting along financially these days. Would you say that you (and your family living there) are better off or worse financially than you were a year ago?

Press 1 for Better Off

Press 2 for Worse Off

Now, looking ahead -- do you think that a year from now you (and your family living there) will be better off financially, or worse off, or just about the same as now?

Press 1 for Better Off

Press 2 for Worse Off

Now turning to business conditions in the country as a whole -- do you think that during the next 12 months we'll have good times financially, or bad times, or what?

Press 1 for Good times financially

Press 2 for Bad times Financially

Looking ahead, which would you say is more likely -- that in the country as a whole we'll have continuous good times during the next five years or so, or that we will have periods of widespread unemployment or depression, or what?

Press 1 for Good times

Press 2 for Bad times

About the big things people buy for their homes--such as furniture, a refrigerator, stove, television, and things like that. Generally speaking, do you think now is a good or bad time for people to buy major household items?

Press 1 for Good times to Buy

Press 2 for Bad time to buy

Great, now I am going to read you a short list of individuals. For each, please tell me if your opinion of them is generally favorable or generally unfavorable. If you are undecided or if you have never heard of someone, just tell me that.

First take Hillary Clinton. Is your opinion of Hillary Clinton generally favorable or generally unfavorable?

Press 1 for favorable

Press 2 for unfavorable

Press 3 if you are undecided

Press 4 if you've never heard of this public figure

Is your opinion of Donald Trump generally favorable or generally unfavorable?

Press 1 for favorable

Press 2 for unfavorable

Press 3 if you are undecided

Press 4 if you've never heard of this public figure

Now let's jump right to possible matchups in the general election in 2016. If the presidential election was tomorrow and the candidates were Republican Donald Trump and Democrat Hillary Clinton, who would you vote for?

Press 1 for Donald Trump

Press 2 for Hillary Clinton

Press 3 if you are Undecided

Which Candidate, Donald Trump or Hillary Clinton do you think will be better for the economy?

Press 1 for Donald Trump

Press 2 for Hillary Clinton

Press 3 if you are Undecided

Which Candidate, Hillary Clinton or Donald Trump do you think will be better at keeping America safe from terrorism?

Press 1 for Hillary Clinton

Press 2 for Donald Trump

Press 3 if you are Undecided

Are you currently registered as a Republican, Democrat, Independent, another party or are you not registered?

Press 1 for Republican

Press 2 for Democrat

Press 3 for Independent/another party

Press 4 for Not registered

What is your educational level?

Press 1 for less than high school

Press 2 for high school degree or equivalent

Press 3 for some college but no degree

Press 4 for a college degree

Press 5 for Graduate degree or higher

What is your income level?

Press 1 for under \$25,000

Press 2 for \$25,001-\$75,000

Press 3 over \$75,000

State /region

Executive Summary

The Hispanic Consumer Sentiment Index (CSI) saw a drop for its second consecutive month landing with a score of 93.5, down .5 points from April's 94 but up 3.7 points from where it was a year ago. The University of Michigan (UM) Consumer Index bounced back from a 9 month low of 89 in April to its highest score since June 2015.

The age cohort continues to show significant differences with those over 55 dropped for the fourth consecutive month scoring a 65 in May after posting 68 in April, 72 in March and a 77 in February. Those 18-34 scored a 98 and those 35-54 scored highest with a 102.

Female sentiment dropped for the first time in three months with a 94 after posting a 103 in April and a 98 in March. Males bounced back with a 93 after posting an 85 in April from a 94 in March. Those earning under \$25,000 increased their March and April numbers of 75.8 and 75.2 with an 82.8 in May. Those earning \$25,001-\$75,000 gave dropped for the second straight month with a 94.5 down from a 97.13 in April and a 101.95 in March. Top income earners of over \$75,000 continue to score highest but dropped 6 points from April with a 104 score.

	CSI (Sept)	CSI (Oct)	CSI (Nov)	CSI (Dec)	CSI (Jan)	CSI (Feb)	CSI (Mar)	CSI (Apr)	CSI (May)
under \$25,000	85.19	77.39	81.20	80.86	70.54	82.3	75.77	75.18	82.77
\$25,001-\$75,000	99.10	96.40	92.55	94.35	96.00	96.8	101.95	97.13	94.46
\$75,000+	106.80	103.83	96.02	100.90	103.09	101.2	107.92	110.02	104.00

The midwest region kept with their score of 77.1 in April with a 76.1 in May. Those in the south saw a slight drop from 97.5 to 95.3. The west and northeast held steady at 93.46 and 99.37 respectively.

The Current Economic Conditions (CEC) continues to have found consistency after two months of fluctuation (moving from 90.05 in January to 98.2 in February,) increasing .6 points from April with a 98.8 in May. There is slight reason for optimism as the April score is 5.9 points higher than it was a year ago which then went on for two months of growth in May and June. This index continues to lag behind the Michigan CEC as it has since its inception; the current difference increased from 8.5 to 11.1 points the largest difference since January.

The CEC have females in better economic condition than their male counterparts but only by 6 points (102 to 96) which is much closer than the April difference of 18 points, 107 to 89.

Older age demographic continue to be the weakest CEC for the last year with a score of 71, down 14 points from April's 86. The other two age groups saw improvements of 7 points (104 in May from 97 in April) for those 18-34, and 3 points (107 from 105 in April) for those 35-54.

All the respondents with a High School degree or better scored over 100 (college degree 102.5, High School Degree 100.4, and some college at 107.2) while those with less than a High School degree scored a 90.7 up from a 79.1 in April.

Similar to the last ten months, those earning under \$25,000 report the lowest CEC with an 89.6, up 7 points from April (82.6) which is up 9.1 points from an 80.5 in February, and up 21.8 points from November's score of 67.8. There maintains a positive relationship between income level and CEC with those earning in the middle income group score a 98.1 up from a 95.2 in April and those earning over \$75,000 scored a 110.9, down from a 122.1 last month.

Hispanic respondents' economic conditions were clustered around the mean of 98.8 with the strongest region in the Northeast again at 101.4, followed by the South 101.2 and the West 97.6. The Midwest continues to lag behind the other regions with a 90.1.

Those respondents born in the US had an even significantly stronger economic condition than those born out of the US for the second month +28 (110 to 72) from +16 in April (102.6 to 87.1).

	May-15	Jun-15	Jul-15	Aug-15	Sep-15	Oct-15	Nov-15	Dec-15	Jan-16	Feb-16	Mar-16	Apr-16	May-16
FAU	87.7	95.2	91.0	85.4	97.8	91.3	86.7	89.1	87.5	90.2	93.1	91.3	90.0
Michigan	84.2	87.8	84.1	83.4	78.2	82.1	82.9	82.7	82.7	81.9	81.5	77.6	84.9

The Index of Consumer Expectations (ICE) continues to outpace the national average set by UM by 5.1 points, 90.0 to 84.9. This is the closest margin since December (4.4 points). The Michigan Index had its first gains since November and its largest gains since in over a year with an increase of 7.3 points, 84.9 is also its highest score in over a year. Females dropped 12 points from a 100.6 to 88.6 and are now outscored by males who posted a 91.5 which is up from an 82.3 in April. Age continues to be a significant variable with those over 55 scoring a 59.9, up slightly from the 56.7 in April but down 13.4 points from January’s score of 74.3. Those 18-34 scored a 95, while those 35-54 saw an decrease from 105.2 in April to 99.5 in May.

US Presidential Election 2016

(Registered Hispanics, n=409; +/-4.8% margin of error)

The Presumptive

Democrat Presidential

nominee Hillary Clinton

leads the Presumptive

Republican Presidential

nominee Donald Trump

50% to 27% among

registered Hispanic

voters. President Obama

defeated Mitt Romney in 2012, 71% to 27% among Hispanic voters.

Clinton supporters are in a stronger economic position having significantly stronger consumer sentiment scores 105 to 77 compared with Trump supporters. Clinton supporters score higher on their current economic condition 113 to 90 and Clinton supporters have more optimism for future financial success 99 to 76.

Region was the most significant variable influencing candidate choice with Clinton holding an 18 point lead in the Northeast, 15 points in the Midwest, 35 points in the South and 24 points in the West.

	Trump	Clinton	Undecided
Northeast	34%	52%	14%
Midwest	36%	51%	13%
South	21%	56%	23%
West	19%	43%	38%

Females are breaking for Clinton +32 (51% to 19%) and males are breaking for Clinton +21 (49% to 28%). Republicans are voting for Trump 49% to 30% (+19) but Clinton is winning among Democrats +53 (67% to 14%) and Independents +12 (39% to 27%). Trumps' strongest income cohort are those earning over \$75,000 where he is down 9 points (29% to 38%), all other income brackets he trails by an average of 33 points.

Lower income earners have a more favorable opinion of Clinton than higher income earners.

Those under \$25,000 have a 51% favorable opinion (+26), mid income earners have a 40% favorable (+6), and highest earners over \$75,000 have a 34% favorable opinion (+2). Trump has

the reverse effect but is

under water among all

income groups. Those over

\$75,000 have a 26%

favorable opinion (-24),

mid income have a 19%

favorable (-42), and low

income have a 23%

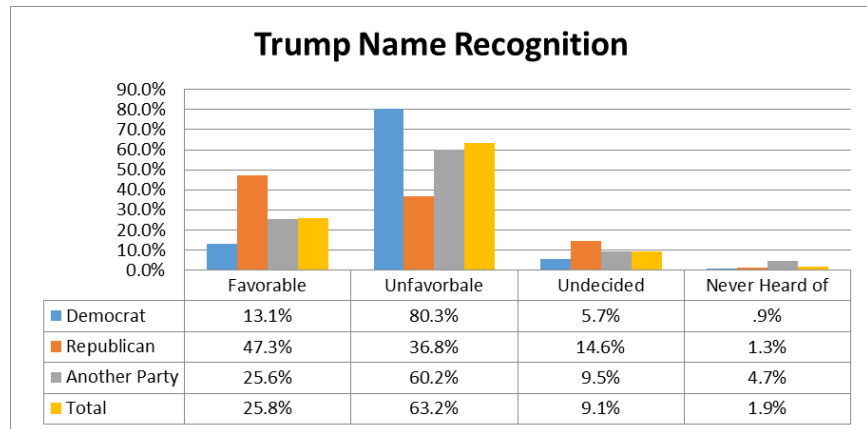

favorable (-47).

Regarding the candidates

two major biographical

strengths, it appears

Hispanics view Clinton as better for the economy and in keeping America safer from terrorism.

Clinton is seen as better prepared for improving the economy overall (50% to 33%) while only Republicans see Trump, the businessman, as the better candidate for the economy 59% to 33%.

Hispanics see Clinton as keeping them safe from terrorism 56% to 27% over the former Secretary of State among all parties.
