

Cybersecurity

Undergraduate MIS Concentration

PROGRAM OVERVIEW

- As digital information moves to a more networked and globalized infrastructure, it is essential that managers understand the threats to this information. The creation of effective corporate-wide security plans with well established security programs, policies, controls, and procedures as well as awareness and training initiatives is vital.
- More and more companies across a variety of industries, such as banking, finance, and healthcare, need to keep rigorous standards and certifications in information security to maintain business operations.

Cybersecurity Concentration

PROGRAM COURSE INFORMATION

- To complete the concentration requirement, students must major in Management Information Systems & complete all four required courses below with minimum grades of "C" required in all courses.
